### PROFILE

---

I am a legal tech engineer and researcher. My work lies within analysing and implementing solutions for automation in legal domain, as well as analysing products that are currently on the market. In the past much of my work lied within automatic detection of linguistic patterns within legal data, with particular focus on predicting court decisions. A lot of my experience is working with judgements of the European Court of Human Rights as well as Dutch case law. My professional interests include but are not limited to improving accessibility to justice, legal analytics, interpretability of NLP models, automation through AI, and related areas. I am looking for engineering, advisory and consulting positions in legal technology in the Netherlands and/or remote.
